

# CSS3

## TEXT-SHADOW

The CSS3 **text-shadow** property allows you to apply one or more shadows to any block of text.

**Text-shadow**

text-shadow

syntax

The **text-shadow** property takes three `<length>` values and one color value.

```
/* text-shadow example */  
p { text-shadow: 10px 10px 5px #000; }
```

The <length> values can include **relative** and **absolute** values.

```
/* different length values */
```

```
p { text-shadow: 1em 1em 1em #000; }  
p { text-shadow: 2ex 2ex 2ex #000; }  
p { text-shadow: 3px 3px 3px #000; }  
p { text-shadow: 4in 4in 4in #000; }  
p { text-shadow: 5cm 5cm 5cm #000; }  
p { text-shadow: 6mm 6mm 6mm #000; }  
p { text-shadow: 7pt 7pt 7pt #000; }  
p { text-shadow: 8pc 8pc 8pc #000; }
```

Horizontal offset

The **horizontal offset** of the shadow is defined first.

```
/* horizontal offset */  
p { text-shadow: 10px 10px 5px #000; }
```

Horizontal offset

The diagram consists of a light gray rectangular box containing the text 'Horizontal offset'. A white arrow points vertically upwards from the center of the box to the '10px' value in the CSS code above.

A **positive value** will place the shadow on the right of the text.

**Text**

Text

Positive horizontal text-shadow

A **negative value** will place the shadow on the left of the text.

**Text**

Text

Negative horizontal text-shadow

Vertical offset

The **vertical offset** of the shadow is defined second.

```
/* vertical offset */  
p { text-shadow: 10px 10px 5px #000; }
```

Vertical offset

The diagram consists of a light gray rectangular box containing the text 'Vertical offset'. A vertical arrow points upwards from the top center of this box to the second '10px' value in the CSS code above.

A **positive value** will place the shadow below of the text.

**Text**

Text

Positive vertical text-shadow

A **negative value** will place the shadow above the text.

Blur radius

The **blur radius** of the shadow is defined third.

```
/* blur radius */  
p { text-shadow: 10px 10px 5px #000; }
```

Blur radius

The diagram consists of a light gray rectangular box at the bottom containing the text 'Blur radius'. A white arrow points vertically upwards from the top center of this box to the '5px' value in the CSS code above. The '5px' value in the code is highlighted in yellow.

If set to a value of “0” the shadow will be **hard edged**.

**Text**

Text

Hard edged text-shadow

The higher the blur radius number,  
the **softer** the text-shadow will be.

**Text**

Text

Soft text-shadow

Negative values are **not allowed**  
for the bur radius.

Text-shadow color

The color may be specified **before**  
**or after** the <length> values.

```
/* color before lengths */  
p { text-shadow: #000 10px 10px 5px; }
```

Text shadow color

```
/* color after lengths */  
p { text-shadow: 10px 10px 5px #000; }
```

Text shadow color

The color can be specified using a **variety of methods** including: keyword, hexadecimal notation, RGB/RGBA notation and HSL/HSLA notation.

Essential and  
optional values

Text-shadow **must include the two offset values**. Blur radius and a shadow color are optional.

```
/* essential and optional values */  
p { text-shadow: 10px 10px 5px #000; }
```

If no blur radius is specified,  
browsers will **assume a '0' value**  
and the shadow will be hard  
edged.

```
/* essential and optional values */  
p { text-shadow: 10px 10px ? #000; }
```

Zero value used if none defined

If no color is specified, most browsers will use **the color of the text** as the color value.

```
/* essential and optional values */  
p { text-shadow: 10px 10px 5px ?; }
```

Text color value used if none defined

Multiple  
text-shadows

**Multiple text shadows** can be applied to the one piece of content. They are applied as a comma-separated list.

```
/* essential and optional values */
```

```
p  
{
```

```
  text-shadow:
```

```
  10px 10px 5px #000,
```

```
  20px 20px 20px yellow;
```

Text-shadow 1

Text-shadow 2

```
}
```

The shadow effects are applied front-to-back: the first shadow is on top and the others are layered behind. Shadows **cannot overlay the text itself.**
